

Urban Toronto Sodding Checklist

Sodding Canada - City Lawn Planning Guide 2026

Before You Order Sod

1 Assess the light

Count hours of direct sun in each area to pick the right blend.

2 Measure access

Check gate widths and the route from street to yard for delivery.

3 Test the soil

Note compaction, clay, and where water pools before laying sod.

Getting the Lawn to Last

1 Fix the base first

Loosen or replace topsoil and grade away from the house.

2 Match sod to shade

Use a fescue-heavy blend for dim corners, sun blend for open areas.

3 Lay fresh, water fast

Install within a day of delivery and soak thoroughly.

4 Time it right

Sod in spring or early fall so roots establish before extreme weather.
